

Amendments to the Claims

*All pending claims are reproduced below.*

1-46. (Canceled)

47. (Currently amended) A computer-implemented method for helping a user learn, the method comprising:

(a) allowing the user to access materials related to a subject to be presented via a presentation device, to help the user learn;

(b) retrieving, from a storage device, at least two rules to help determine which additional materials to present to the user;

~~(c)~~ (c) determining, based on the at least two rules retrieved from the storage device, the which additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user, ~~with the at least two rules having a conflict in view of an assessment of the user, and with the conflict resolved to determine which additional materials to present to the user;~~ and

~~(e)~~ (d) selecting at least some of the materials accessed by the user at (a) for presentation to the user via the presentation device, for a further time so that at least the user's memory on the materials can be refreshed,

wherein (c) includes determining, by a computing device, whether the at least two rules have a conflict in view of an assessment of the user, and, if there is a conflict, resolving the conflict by generating another rule to help determine the additional materials to present to the user, the computing device being coupled to the storage device,

48. (Currently amended) A computer-implemented method as set forth in claim 47, wherein at ~~(e)~~ (d) the selecting of at least some of the materials accessed by the user at (a) for presentation to the user for the further time occurs after the additional materials determined at ~~(b)~~ (c) have been presented to the user.

49. (Currently amended) A computer-implemented method as recited in claim 47,

wherein the method further comprises having at least some of the accessed materials transmitted via a network to the presentation device ~~a device~~ to be presented to the user, and

wherein the network includes a private network and a public network.

50. (Currently amended) A computer-implemented method as recited in claim 47, wherein the at least some of the materials accessed by the user at (a) are selected at ~~(e)~~ (d) for presentation to the user for the further time depending on a time elapsed from when the user accesses the materials at (a).

51. (Original) A computer-implemented method as recited in claim 50, wherein the at least some of the materials accessed by the user at (a) can be repeatedly selected for presentation to the user, but if the time elapsed is more than a predetermined duration of time, the at least some of the materials accessed by the user at (a) are no longer selected.

52. (Withdrawn) A computer-implemented method as recited in claim 47 further comprising generating materials on the subject for the user to learn.

53. (Original) A computer-implemented method as recited in claim 47, wherein the at least some of the materials accessed by the user at (a) can be repeatedly selected for presentation to the user.

54. (Currently amended) A computer-implemented method as recited in claim 47, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, also relate to the subject.

55. (Withdrawn-currently amended) A computer-implemented method as recited in claim 47, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, are determined depending on a time elapsed from when the user accesses the materials at (a).

56. (Currently amended) A computer-implemented method as recited in claim 47, wherein resolving the conflict between the at least two rules involves favoring one of the at least two rules over another one of the at least two rules.

57. (Currently amended) A computer readable storage medium comprising a plurality of instructions for helping a user learn, the plurality of instructions, when executed by a computing device, result in the computing device:

(a) allowing the user to access materials related to a subject to be presented via a presentation device, to help the user learn;

(b) retrieving, from a storage device, at least two rules to help determine which additional materials to present to the user;

~~(b)(c)~~ determining, based on at least two rules retrieved from the storage device, the ~~which~~ additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user, ~~with the at least two rules having a conflict in view of an assessment of the user, and with the conflict resolved to determine which additional materials to present to the user;~~ and

~~(c)(d)~~ selecting at least some of the materials accessed by the user at (a) for presentation to the user via the presentation device, for a further time so that at least the user's memory on the materials can be refreshed,

wherein (c) includes determining whether the at least two rules have a conflict in view of an assessment of the user, and, if there is a conflict, resolving the conflict by generating another rule to help determine the additional materials to present to the user, the computing device being coupled to the storage device.

58. (Currently amended) A computer readable storage medium as recited in claim 57, wherein the at least some of the materials accessed by the user at (a) are selected at ~~(c)(d)~~ for presentation to the user for the further time depending on a time elapsed from when the user accesses the materials at (a).

59. (Withdrawn-Currently amended) A computer readable storage medium as recited in claim 57, wherein the plurality of instructions, when executed by the

computing device, also result in the computing device generating materials on the subject for the user to learn.

60. (Currently amended) A computer readable storage medium as recited in claim 57, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, also relate to the subject.

61. (Withdrawn-Currently amended) A computer readable storage medium as recited in claim 57, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, are determined depending on a time elapsed from when the user accesses the materials at (a).

62. (Currently amended) A computer readable storage medium as recited in claim 57, wherein resolving the conflict between the at least two rules involves favoring one of the at least two rules over another one of the at least two rules.

63. (Currently amended) A computer-implemented method for helping a user learn, the method comprising:

(a) allowing the user to access materials related to a subject to be presented via a presentation device, to help the user learn;

(b) retrieving, from a storage device, at least two rules to help determine which additional materials to present to the user; and

~~(b)-(c)~~ determining, based on at least two rules retrieved from the storage device, the which additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user, with the at least two rules having a conflict in view of an assessment of the user, ~~and with the conflict resolved to determine which additional materials to present to the user~~

wherein (c) includes determining, by a computing device, whether the at least two rules have a conflict in view of an assessment of the user, and, if there is a conflict, resolving the conflict by generating another rule to help determine the additional materials to present to the user, the computing device being coupled to the storage device.

64. (Currently amended) A computer-implemented method as recited in claim 63, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, are determined depending on a time elapsed from when the user accesses the materials at (a).

65. (Withdrawn) A computer-implemented method as recited in claim 63 further comprising generating materials on the subject for the user to learn.

66. (Currently amended) A computer-implemented method as recited in claim 63, wherein resolving the conflict between the at least two rules involves favoring one of the at least two rules over another one of the at least two rules.

67. (Withdrawn) A computer-implemented method as recited in claim 63, wherein at least some materials are selected to be presented to the user based on a comparison of an attribute of the user to a plurality of other users.

68. (Currently amended) A computer-implemented method as recited in claim 63, wherein the additional materials determined to be presented to the user at (c) ~~(b)~~, also relate to the subject.
